- Developer @ Wortell

■ Agenda

- 1 What is GitHub Spec Kit
- 2 How to install
- 3 Workflow
- 4 Behind the scenes
- 5 The Good, the Bad & the Ugly

WHAT IS IT

SDD

Spec-Driven Development

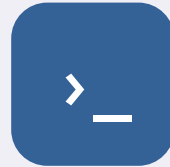

■ Prerequisites

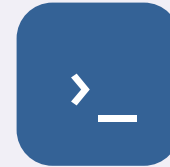

Python

3.11 or newer

Git

version control

uv / pipx

package management

Persistent install

1 • Install the CLI

```
uv tool install specify-cli --from git+https://github.com/github/spec-kit.git@vX.Y.Z
```

2 • Initialize a project

```
specify init my-project
```

■ One-off install

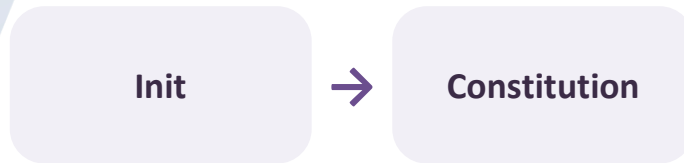

Run it once — no install, no cleanup

```
uvx --from git+https://github.com/github/spec-kit.git specify init <PROJECT_NAME>
```

Workflow

FIRST TIME

EVERY FEATURE

Outlined = optional step

FIRST-TIME SETUP

init

Scaffold a Spec Kit project

```
-- integration <ai coding agent code>  
-- script <sh | ps>
```

Init

Constitution

Wiesbaden

1

FIRST-TIME SETUP

constitution

Define your non-negotiables

Implement

Demos

We love Demos!

The good

Easy-to-understand workflow

Forces you to think about what you want — instead of just vibecoding

Auditability through the specs/<feature> folder

Re-implement the same plan with a different model or tech stack

! The bad

So many questions before you get a single line of code

Lots of overhead

€ The ugly

€€€€€

It all adds up.

Q&A
